

## Call for Papers

# 2017 Workshop on Modeling and Simulation of Cyber-Physical Energy Systems

21 April 2017, Pittsburgh, PA, USA

Modern energy systems combine information technology with electrical and thermal infrastructure. They also interact with other systems like markets and are subject to many regulations. Existing modeling and simulation tools are not capable to cover such systems in all of their aspects, hence new languages, methods and tools are necessary. A combination of universal modeling languages and established, domain-specific tools (like grid simulators and telecommunication simulators) is necessary. This leads to hybrid energy systems models, where for instance a multi-agent framework and an electric grid simulator are combined to investigate smart electric vehicle charging algorithms. Also the potential size of such systems poses a challenge for modeling and simulation. And implementing these future cyber-physical systems is another substantial challenge. The designed algorithms need to be compact, computationally inexpensive, potentially self-organizing and intrinsically stable if applied to real energy systems.

This workshop brings together researchers and industrialists to exchange newest research results. Authors are invited to submit full-length high-quality papers (max. 6 pages), formatted according to the [manuscript templates](#) for IEEE conference proceedings. **Contributions on work in progress are welcome.**

**During the workshop, a dedicated session for demos is foreseen. We encourage tool developers (with industrial as well as academic background) to apply for a slot in this session.** Please contact the workshop organizers to get in touch.

The workshop will be held as part of the [Cyber-Physical System Week 2017](#).

### Topics:

- Hybrid modeling and simulation
- Co-Simulation of multi-domain systems
- Ontologies for energy systems
- Applications of cyber-physical energy systems
- Distributed algorithms and control
- Standards in interfacing components
- Formal languages for energy systems
- Smart Grid modeling
- Smart Cities modeling
- Design of simulations/experiments

### General Chairs:

- Peter Palensky (TU Delft, Netherlands)
- Anurag Srivastava (Washington State Univ., USA)

### Important Information:

- Submission deadline: 07.02.2017
- Notification of acceptance: 28.02.2017
- Final paper submission deadline: 14.03.2017
- Full paper submissions are peer-reviewed by at least 3 reviewers.
- Please format papers according to the [manuscript templates](#) for IEEE conference proceedings.
- The conference proceedings will be published on IEEE Xplore.
- [www.palensky.org/mscpes/2017](http://www.palensky.org/mscpes/2017)

### Program Chair:

- Edmund Widl (AIT, Austria)

### Program Committee:

- Matthias Althoff (TU Munich, Germany)
- Christoph Grimm (University Kaiserslautern, Germany)
- Seung Ho Hong (Hanyang University, Korea)
- Tommi Karhela (VTT, Finland)
- Wolfgang Kastner (TU Vienna, Austria)
- Sebastian Lehnhoff (OFFIS, Oldenburg, Germany)
- Yan Liu (Concordia University, Canada)
- Antonello Monti (RWTH Aachen University, Germany)
- Sven Christian Müller (logarithmo, Germany)
- Yiyu Shi (University of Missouri, USA)
- Pierluigi Siano (University of Salerno, Italy)
